For this project you're going to build a full page from scratch. 💙

Use one of the resources linked below to find a practice project to work on, but remember: your project should be a full-page design, not just a component.

We know that some things are hard, irrelevant for now, or you may not have learned them yet, so we advise you to not pick a project that uses forms, JavaScript or animations. Alternatively you can also skip those parts.

The other two main requirements are that the design you pick **needs to be responsive and have, at least, two columns in its desktop layout.**

In general, try to follow these steps:

1. Use the workflow from the previous concept to start working.
2. If you run into problems, solve them one at a time.
3. If you don't understand a problem: make a simpler example and try to break it down and understand it. Then apply it in the bigger project.

Important note: This is not an exercise, this is a project. This means that our mentors will grade it and give you feedback.

Requirements

- [ ] The page needs to be responsive.
- [ ] The page needs to be created mobile first.
- [ ] The page needs to use Flexbox at least once.
- [ ] The page needs to have at least two columns in its desktop layout.
- [ ] The page needs to use CSS Grid at least once.
- [ ] You need to use CSS custom properties for the text colors and sizes.

Tips

Don't go for perfect, there is no such thing.
If you get stuck: ask us and your fellow students for help on the Campus.
Take breaks 🧠 💙
